

Dear Secret Agents,

"If you want to save the World from mass destruction, you **must find** the answers to the questions below by *creating* graphs with the given data and technology. The answers to the questions will give you the *location* where the "Nuclear Football" has been hidden in my secret hideout. In order to unlock the data, you must create a survey and your own graph representing your data. You have eight days before I discover the secret code **and** hold the World captive!"

Evil Dr. Math

Answer the following questions using the graphs you created:

Question #1: What is the highest average temperature for the month of May in Los Angeles?

Question #2: Who has more players that are 5'10", Michigan or Michigan State?

Question #3: Which city has an overall higher average temperature for the month of May?

Question #4: What color M&Ms have a degree measure of 108?

Use the answers from above to complete the following to find where the "football" and Evil Dr. Math are located:

Address _____ City _____

Color of the Building _____
